

IQOO HACKATHON 2026

SCREENIQ

SEE IT. UNDERSTAND IT. DO IT.

An AI action layer for everything visible on your phone.

FOR EVENT POSTER

Date · Time · Venue detected

◆ **ADD TO CALENDAR**

One tap. Done.

ADDRESS → MAPS

CONTACT → SAVE

PROBLEM

WE CAN SEE INFORMATION INSTANTLY. ACTING ON IT STILL TAKES WORK.

Every time you see something useful on your screen, you repeat the same manual chain:

1

SEE

Event poster · Address · Phone number · URL · QR

2

SCREENSHOT → SHARE → ASK →
COPY

Switch apps. Repeat.

3

ACT

Finally — after too many steps.

EVENT POSTER

Manually note date, open Calendar, type details

ADDRESS

Screenshot → copy → open Maps → paste

PHONE NUMBER

Read → memorise → open Contacts → type

TASK / URL / QR

Same friction. Every. Single. Time.

"The information is already on the screen. Why make the user manually move it somewhere else?"

SOLUTION

TURN THE SCREEN INTO AN AI INPUT SURFACE.

1

FOUR-FINGER GESTURE

User triggers ScreenIQ anywhere, instantly

2

SCREEN CAPTURED

Current display becomes the AI input

3

UNDERSTANDS CONTEXT

EVENT · DATE · TIME · VENUE identified

4

◆ ADD TO CALENDAR

Highest-value action surfaced. User confirms. Done.

ADDRESS → MAPS

PHONE → CONTACT

TASK → REMINDER

ARCHITECTURE

FROM PIXELS TO ACTIONS.

GESTURE Four-finger interaction triggers capture	CAPTURE Current screen pixels acquired via AccessibilityService
PERCEPTION OCR + Computer Vision parse visible content	INTELLIGENCE Local AI reasons on context and intent
PLANNING Selects highest-value action for the user	EXECUTION Android Intent fired · User confirms

 Privacy-first · Local processing wherever practical · User confirmation for consequential actions

ONE SCREEN. MANY ACTIONS.

Same content. Smarter possibilities.

See
Understand
Do It.

MOST AI TOOLS HELP YOU UNDERSTAND. SCREENIQ HELPS YOU **ACT**.

"The screen becomes the interface between human intent and AI action."

See It. Understand It. Do It.

Turn your screen into an AI input surface.

SCREENIQ

TRADITIONAL WORKFLOW

Before

Too many steps. Same information.

After

One gesture. Instant action.

Works with all kinds of on-screen information.

TECHNOLOGY

Kotlin

BUILT FOR THE PHONE, NOT JUST FOR THE CLOUD.

CORE STACK — IQOO DEVICE

GESTURE LAYER

Jetpack Compose · AccessibilityService

OCR + COMPUTER VISION

On-device perception pipeline

LOCAL AI

Open-source models · Local inference

ANDROID INTENTS

Native action execution · Kotlin

OFFICE KIT — OPTIONAL EXTENSION

PHONE ↔ LAPTOP

Demo support & development workflow

OPTIONAL DASHBOARD

History & extended interaction on larger screen

The phone is the primary interface. The Office Kit extends — it does not define — the experience.

IMPACT

SCREENIQ REMOVES THE GAP BETWEEN SEEING AND DOING.

BEFORE

Information → Manual interpretation → App switching → Action

AFTER — SCREENIQ

Information → **ScreenIQ** → Action

LESS FRICTION

Fewer steps, same result

FEWER APP SWITCHES

One gesture, right app

PRIVACY-FIRST

Local AI, your data stays on device

SCREENIQ

"Your screen already contains the information.
ScreenIQ gives it a way to act."
